

Data Key

Question data

antennae [Exp 1]: Whether the participant answered that the antennae were relevant to bee danger.

body [Exp 1]: Whether the participant answered that the body was relevant to bee danger.

changingstrategy: Free text response indicating if participant's strategy changed.

completelearn [Exp S2, 2]: Whether the participant reported learning the task completely ("yes"), possibly missed some aspects ("mid"), or definitely missed some aspects ("no").

condition: Participant condition (contingent or full_info)

counterbalance: Participant counterbalance (0 to 5). Determines mapping of abstract category structure to visible dimensions.

dangerpercent: Percent of stimuli participant believed to be negative.

degree [Exp S1, S2, 2]: Whether the participant answered that the degrees was relevant to applicant suitability.

difficulty: Participant's rating of task difficulty, on 0 to 10 scale.

education: Participant's self-reported education level.

engagement: Participant's rating of task engagement, on 0 to 10 scale.

finalscore: Cash bonus achieved by participant.

gender: Participant's self-reported gender.

howtoimprove: Participant's free text feedback on how to improve the task.

instructionloops: Number of times the participant failed the post-instructions quiz.

legs [Exp 1]: Whether the participant answered that the legs were relevant to bee danger.

major: Participant's self-reported college major.

numdimchecked: Number of dimensions participant selected as relevant to stimulus value.

pastemployer [Exp S1, S2, 2]: Whether the participant answered that the past employer was relevant to applicant suitability.

pastposition [Exp S1, S2, 2]: Whether the participant answered that the past position was relevant to applicant suitability.

penpaper: Whether the participant self-reported using pen and paper to aid in the task.

skill: [Exp S1, S2, 2]: Whether the participant answered that the applicant's skill was relevant to applicant suitability.

strategy: Free text response indicating the participant's strategy during the task.

uniqueid: Unique identifying number for the participant.

wings [Exp 1]: Whether the participant answered that the wings were relevant to bee danger.

exclude: Indicates whether participant was excluded from analyses.

rightdimensions: Indicates whether participants selected the correct two dimensions as relevant to stimulus value.

trapdimensions: Indicates whether participants selected just one of the correct two dimensions as relevant to stimulus value.

Task data

ap_payoff: Payoff for approaching the stimulus on the current trial.

av_payoff: Payoff for avoiding the stimulus on the current trial.

block: Block number (each block contains 16 trials).

category: Whether the stimulus is in the good (1) or bad (0) category (assuming no outcome noise).

category_withnoise [Exp S2, 2]: Whether the stimulus on the current trial will actually produce a good or bad outcome given outcome noise.

condition: Participant condition (contingent or full_info)

correct: Whether participant selected the optimal response.

counterbalance: Participant counterbalance (0 to 5). Determines mapping of abstract category structure to visible dimensions.

dim0: Value on dimension 0 in underlying abstract category structure (always irrelevant).

dim1: Value on dimension 1 in underlying abstract category structure (always irrelevant).

dim2: Value on dimension 2 in underlying abstract category structure (always relevant, 1 is good).

dim3: Value on dimension 3 in underlying abstract category structure (always relevant, 1 is good).

fullinfo: Whether participant received full feedback regardless of choice on the current trial.

imagenum: Id of visual stimulus (0-15) shown to participant on the current trial.

indiv_value [Exp S1, S2, 2]: Id of individuation value for current stimulus (-1 when individuation not used).

physdim0: Visual dimension mapped to abstract dimension 0.

physdim1: Visual dimension mapped to abstract dimension 1.

physdim2: Visual dimension mapped to abstract dimension 2.

physdim3: Visual dimension mapped to abstract dimension 3.

obscure [Exp S1, S2, 2]: Whether a dimension was occluded on the current trial.

obscureNum [Exp S1, S2, 2]: Which abstract dimension was occluded on the current trial (-1 when no dimension was occluded).

obscureNumPhys [Exp S1, S2, 2]: Which physical dimension was occluded on the current trial (-1 when no dimension was occluded).

response: Participant's response (1 for approach/harvest, 0 for avoid).

reward: Participant's received reward on the current trial.

rt [Exp S1, S2, 2]: Reaction time on current trial.

score_post: Participant's total score following the trial.

score_pre: Participant's total score at the start of the trial.

stimnum: Id of stimulus in abstract category structure (0-15).

swapdim0: Whether 0/1 values are swapped in the the physical dimension mapped to abstract dimension 0.

swapdim1: Whether 0/1 values are swapped in the the physical dimension mapped to abstract dimension 1.

swapdim2: Whether 0/1 values are swapped in the the physical dimension mapped to abstract dimension 2.

swapdim3: Whether 0/1 values are swapped in the the physical dimension mapped to abstract dimension 3.

test: Whether the participant is in the test phase.

trial: Trial number of current trial.

uniqueid: Unique identifying number for the participant.

exclude: Indicates whether participant was excluded from analyses.
