

Criterion	Original Outcome	Precise Reproduction Criteria	Approximate Reproduction Criteria	Not Reproduced Criteria
Primary Outcomes				
Sample size	54	54	46 to 62	not in 46 to 62
Focal variable P-value	0.016	0.016	0 to 0.066	>0.066
Focal variable coefficient	NA	NA	NA	NA
Focal test statistic	6.20	6.20	5.27 to 7.13	not in 5.27 to 7.13
Effect size of focal variable	0.11	0.11	0.09 to 0.13	not in 0.09 to 0.13
Secondary Outcomes				
[1]				
[2]				
[3]				
[4]				

Claim 4: There was a significant interaction between rumination category and reactions to the baseline vs. suppressed conditions, $F(1, 48) = 6.20$, $MSE = 746.04$, $p = .016$, partial eta squared = .11. Clear evidence of SIF (suppression induced forgetting, i.e. negative interpretations for baseline cues but not suppression cues) was obtained for non-ruminators; but not for ruminators.

Description of data: The corresponding author of the paper (<https://doi.org/10.1177/2167702618785339>) shared the dataset of Experiment 2 (file "Ashley_labels.sav") via email on 6/12/21; this dataset was placed here - https://osf.io/6x9qt/?view_only=1c10cb103fd94419bfa6fbba015b7749 - then on 3/23/22 this dataset was downloaded and uploaded to - https://osf.io/mvje7/?view_only=8c59f20788fa4cd79d43c619c96fedf1

Analyst Success Criteria: All outcomes meet the Precise Reproduction Criteria.

Instructions: The "Original Outcome" column for Primary Outcomes should contain the original paper's values if that piece of evidence is reported in the paper, and should otherwise be NA (and all other columns for the same row should be NA too). "Precise Reproduction Criteria," "Approximate Reproduction Criteria," and "Not Reproduced Criteria" columns should contain qualifying values corresponding to each level of reproduction success, which you should fill out using the guidelines found in the Criterion Guide tab. "Secondary Outcomes" are any outcomes that do not fit the Primary Outcome criteria but are included in the Claim 4 (these are optional to include, and can also be omitted). "Claim 4" should include the original Claim 4 copied in word-for-word. "osf view-only link" should be a view-only link to your OSF project that has been created for you (it should have your name in the title). Ensure the view-only link includes all components that are relevant for your reproduction attempt. The "Link to data source" should ideally be the most original source of the data, i.e. the source data. The "Description of data" should include a brief description of the data you intend to use and details regarding how it has been accessed (including the date the data now in the OSF project were downloaded, and dataset version if this is available). Please use the "Analyst Success Criteria" box to describe the criteria you'll be using to assess whether or not the claim reproduced. This should include any primary outcomes you choose to use in your evaluation, all of the secondary outcomes that you plan to report, and any non-quantitative outcomes that additionally need to be present in order for the claim to be reproduced, in your interpretation. For bushel papers, please select only one test per claim, using the guidelines found in [this document](#), which is intended to help guide the selection of evidence and definition of inferential criteria for RR attempts based on bushel-coded claims.
